R&D Activities

Research Group:

**Power semiconductor systems,
Automotive electronics and diagnostics**

Jan Strossa

Assistant Professor

R&D Activities

Research Group: Power semiconductor systems, Automotive electronics and diagnostics

Leader: Associated Professor Petr Simonik, Ph.D.

Academic staff members: Tomas Pavelek, Ph.D., Jan Strossa, Ph.D., Tomas Mrovec, Ph.D., Vladislav Damec, Ph.D., Martin Sobek, Ph.D., Ales Havel, Ph.D. Tomas Klein, Ph.D, Tomas Harach, Ph.D.

Ph.D. students: Petr Cyprich, Pavel Cyprich, Petr Krupa

Main R&D topics:

- Development and implementation of modern power semiconductor converters with utilization of new switching principles and optimization of control algorithms
- Optimization of control and improving the quality of electrical energy with utilization of semiconductor converters
- Design and dimensioning of semiconductor converters for energy accumulation systems
- Research and development in the field of automotive electronics and vehicle diagnostics

R&D Activities

Research Group: **Power semiconductor systems, Automotive electronics and diagnostics**

- **Design of modern topologies of power semiconductor converters**
 - Indirect AC link Frequency Converter
 - Optimization of resonant converter for coupling DC sources

- **Design and manufacture of electric accumulation systems**
 - Reversible voltage inverter for an accumulation unit
 - Power Converters for Coupling different battery technologies (Lead-acid vs LiFePO4)

- **Design, modeling and simulation of power semiconductor converters**
 - 3D CAD Autodesk Inventor
 - OrCAD Pspice
 - Autodesk Eagle / SketchUP
 - Matlab Simulink
 - Ansoft Maxwell

- **Design and testing of complex microcomputer control systems**
 - TMS320F28335 control system
 - NXP Kinetis MKV58FX control system

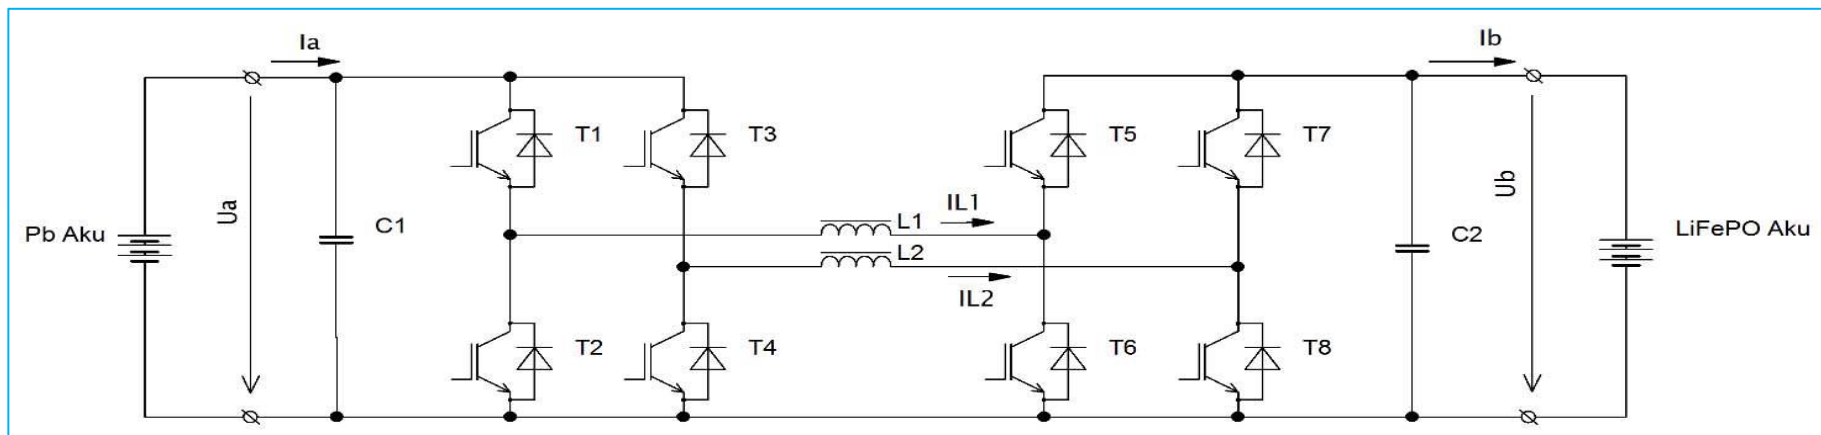

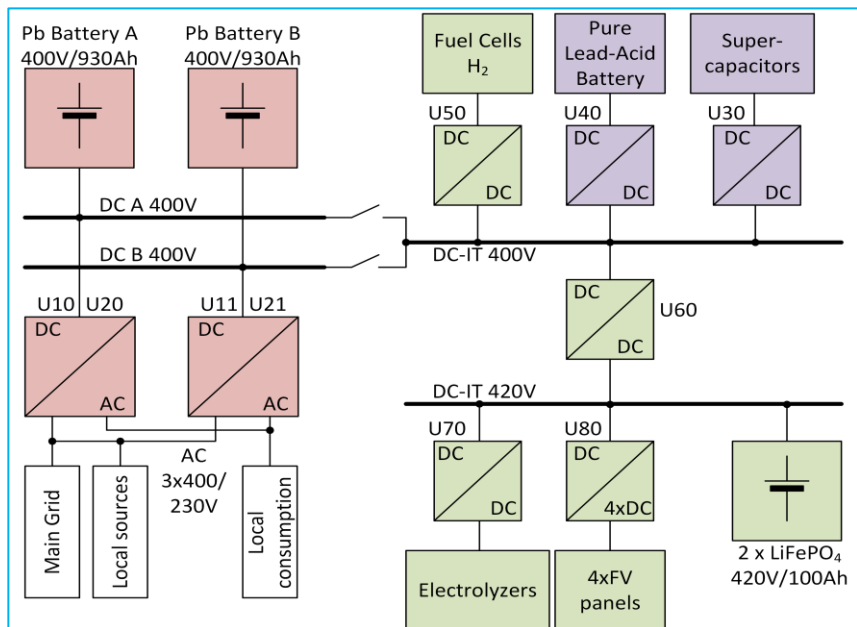

- **HW and SW development for microcomputer control systems using DSC, MCU**
 - Vector control of current in the voltage source rectifier (pulse rectifier) including SDFT
 - Software PLL unit

- **Development, modification and diagnostics of defects of modern ECUs for cars**

R&D Activities: Indirect AC link Frequency Converter, Optimization of resonant converter for coupling DC sources - Laboratory stands and manufactured prototypes

R&D Activities: Reversible voltage inverter for an accumulation unit, Power Converters for Coupling different battery technologies (Lead-acid vs LiFePO₄)

R&D Activities: Design, modeling and simulation of power semiconductor converters

R&D Activities: Designed control system with TMS320F28335

- operating frequency 150MHz
- theoretical time for one instruction 6,67 ns
- floating point (Float format in 32-bit expression)
- 16 analog inputs, 12 bit resolution
- 4 analog outputs, 12 bit resolution
- 6 outputs for connection of power drivers including own power supply
- total 12PWM outputs
- synchronization of PWMs between the converters
- temperature measurement of power modules and the coolant flow through the heat sink
- interfaces: PC - USB, RS422 / 485 - superior system
- possibility of adding a Profibus communication module

R&D Activities: Power semiconductor systems, Automotive electronics and diagnostics Important projects

- LTE220001 – E Town
- TACR TE02000103 – Centre for Intelligent Drives and Advanced Machines Control (CIDAM), Centre of Competence, 2014-2019
- SP2019/117 – Research and development of electronic systems for vehicles with autonomous control III, 2019
- SP2018/167 - Research and development of electronic systems for vehicles with autonomous control II, 2018
- SP2016/156 – Bidirectional semiconductor converters with transformer for coupling AC/DC and DC/DC systems, 2016
- SP2015/174 – Development of modern semiconductor converters for parallel coupling of DC accumulation systems, 2015
- CZ.1.05/1.1.00/02.0070 – IT4Innovations Centre of Excellence, Research Programme VP5, R&D for Innovations Operational Programme, 2011-2014

An overview of the department's projects can be found at the following link:

<https://www.fei.vsb.cz/430/en/research/projects/>

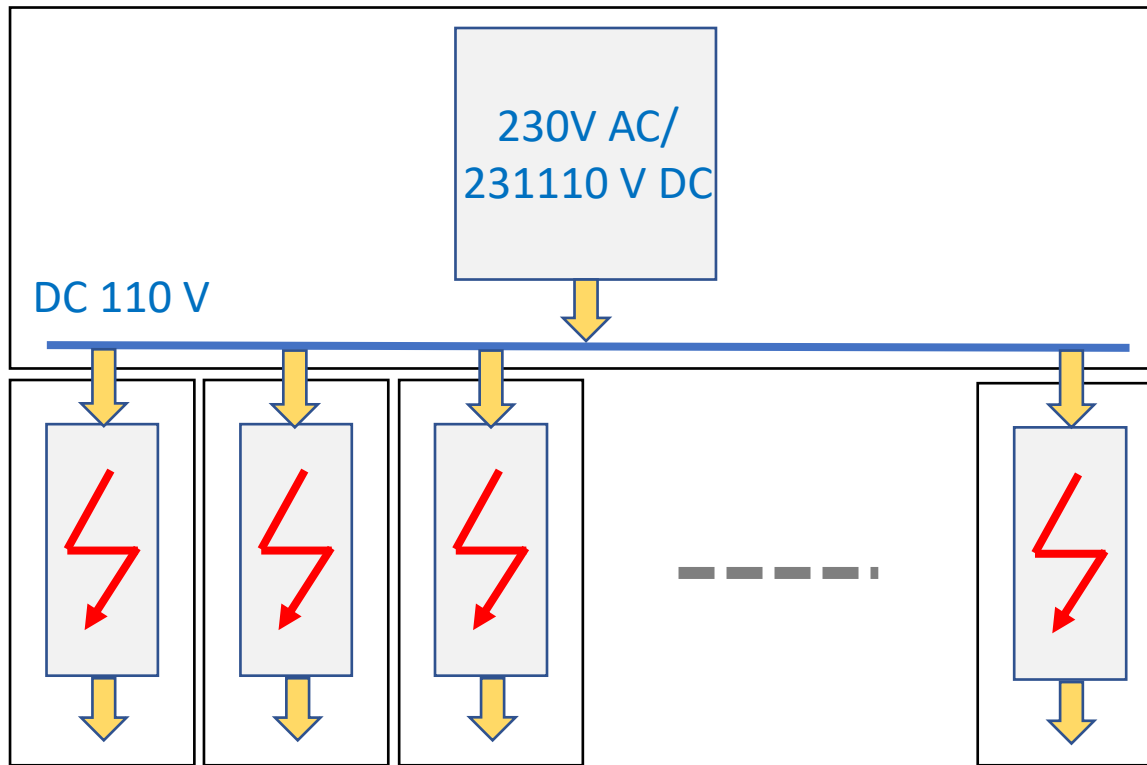

R&D Activities: LTE220001 – Modular wide output voltage range e-vehicles charger

R&D Activities: LTE220001 – Modular wide output voltage range e-vehicles charger

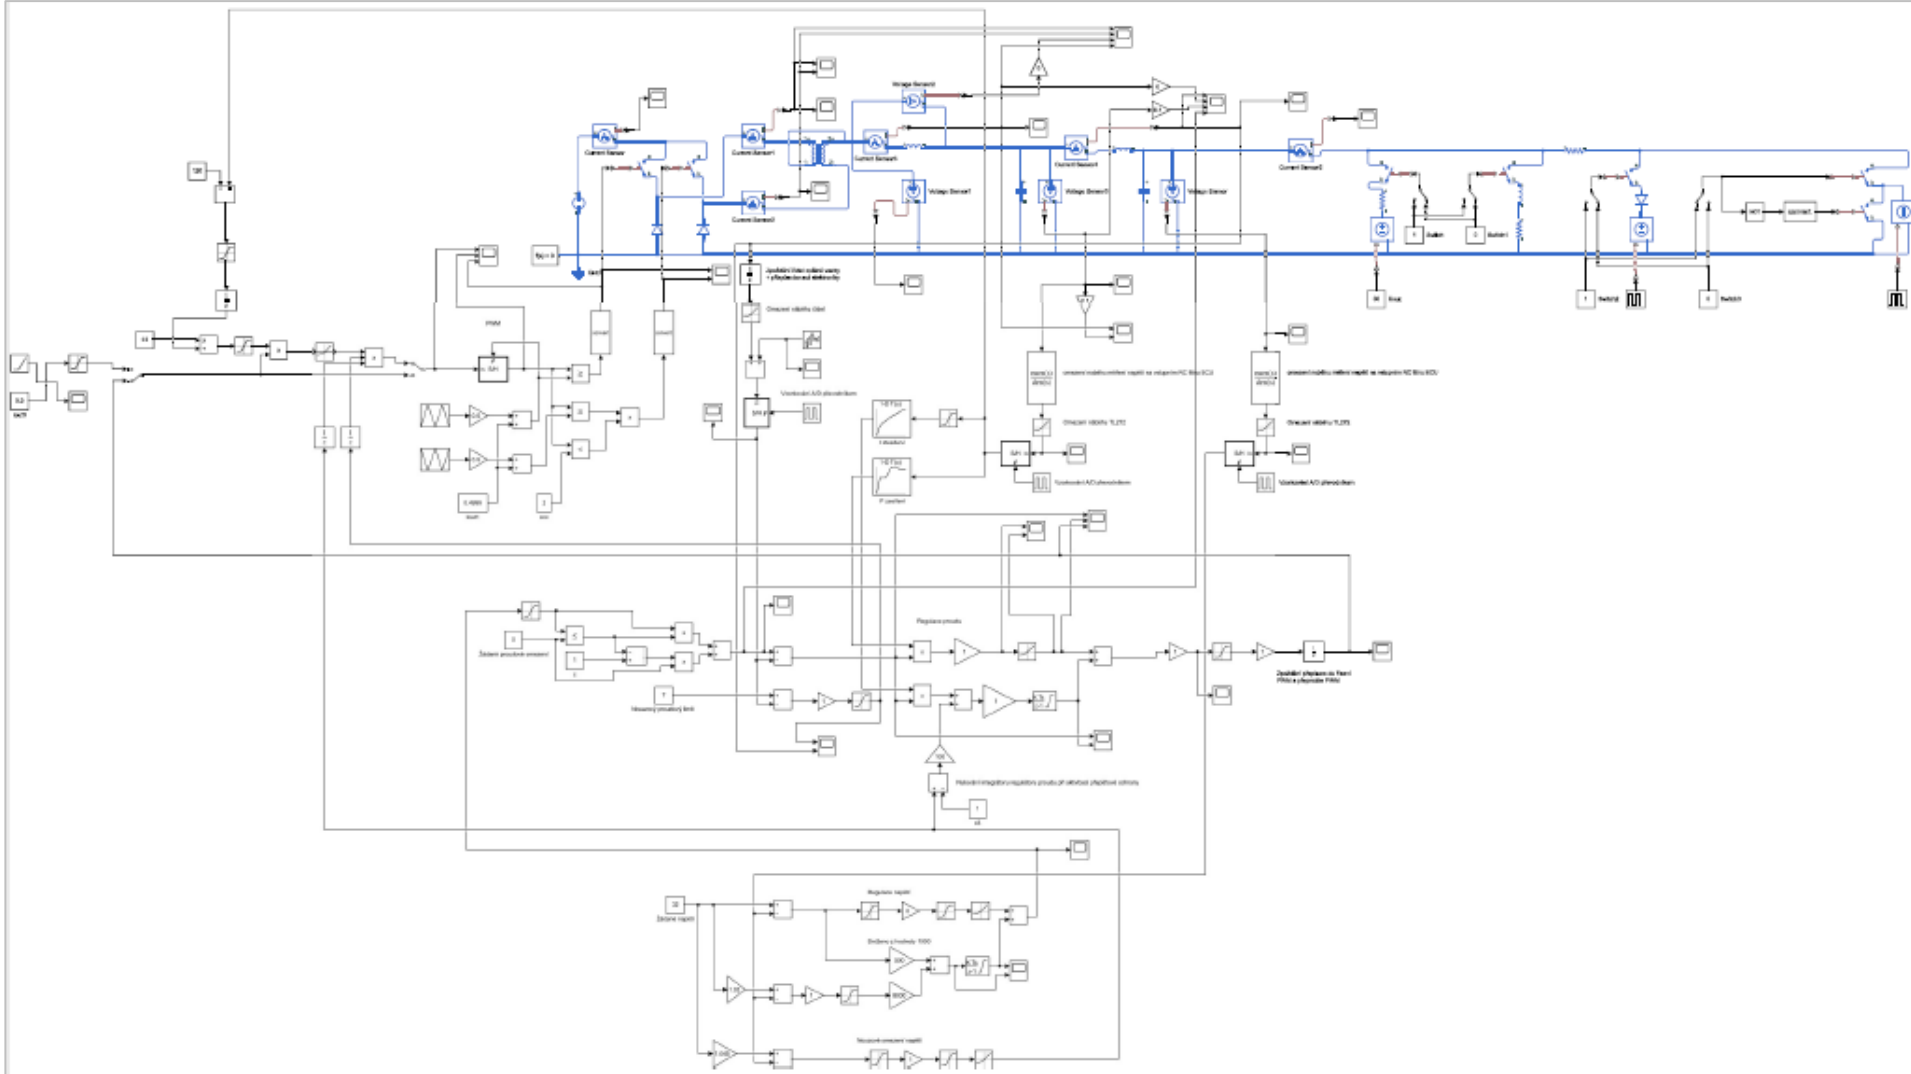

R&D Activities: LTE220001 – Modular wide output voltage range e-vehicles charger

R&D Activities: LTE220001 – Modular wide output voltage range e-vehicles charger

R&D Activities: High voltage grids grounding resistivity measure equipment

R&D Activities: Creating the environment for the vienna rectifier new switching techniques research

R&D Activities: Creating the environment for the vienna rectifier new switching techniques research

R&D Activities: Power semiconductor systems, Automotive electronics and diagnostics
